CHIMERON SPECIES REFERENCE

Version 1.0 (Canon)

Overview

The Chimeron are an ancient, highly advanced sapient species native to the world of Aurelios. They are one of the oldest known civilizations in their region of space and are renowned for their scientific achievements, technological sophistication, and dedication to the preservation and expansion of knowledge.

Unlike many advanced civilizations, the Chimeron do not define themselves through conquest, religion, or ideology. Instead, their civilization is built upon the belief that knowledge is humanity's—or in this case, sapience's—greatest inheritance and responsibility.

The Chimeron are the species of both Torrik and Vertlyx.

Cultural Foundations

Civilization Motto

“To Collect, To Culminate, To Preserve.”

Meaning

The Chimeron believe that knowledge must first be gathered, then refined into deeper understanding, and finally preserved so future generations may build upon it.

This motto appears throughout Chimeron society, including:

- Universities
 - Research institutes
 - Government facilities
 - Archives
 - Exploration vessels
 - Historical monuments
-

Cultural Proverb

“Knowledge is the greatest gift; it alone may transcend time and space.”

This proverb reflects the Chimeron belief that knowledge can outlive individuals, civilizations, and even worlds.

Knowledge can:

- Cross generations
 - Cross civilizations
 - Cross distances
 - Outlive its creator
-

Biology

Classification

Species Name:

Chimeron

Homeworld:

Aurelios

Classification:

Sapient Humanoid Alien Species

Average Lifespan

Average Lifespan:

3,000–5,000 years

Exceptional individuals may exceed this range through advanced medicine and biotechnology.

Development

Chimeron mature much more slowly than humans.

Torrik and Vertlyx are considered young adults despite being:

- Torrik: 120 years old
- Vertlyx: 121 years old

Equivalent to roughly:

18–20 human years

Physical Characteristics

Height

Average Adult Male:

7–8 ft
(2.1–2.4 m)

Average Adult Female:

6.5–7.5 ft
(2.0–2.3 m)

Anatomy

Standard Chimeron anatomy includes:

- Four eyes
- Four arms
- Two legs
- Slightly pointed ears
- Human-like body structure

Despite their alien physiology, Chimeron possess highly expressive faces and body language.

Gravity Adaptation

Aurelios possesses higher gravity than Earth.

Approximate gravity:

1.5 Earth gravity

This has resulted in:

- Increased muscle density
 - Increased bone density
 - Greater durability
 - Greater physical strength
-

Skin & Appearance

Skin Texture

Chimeron skin is primarily smooth but contains naturally reinforced regions around areas commonly subjected to impact or stress.

These include:

- Elbows
- Knees
- Shoulders
- Upper back
- Joint structures

These reinforced regions possess a texture resembling a blend of durable hide and biological armor.

Skin Coloration

Common coloration includes:

- Slate blue
- Gray-blue
- Ocean blue
- Deep sea blue

Individual variation exists.

Bioluminescence

Chimeron possess faint subdermal biological pathways.

Under normal conditions these are subtle.

During:

- Technology use
- Neural activity spikes
- QFRM interaction
- Combat system activation

these pathways may become visible as faint glowing patterns beneath the skin.

Reproduction

The Chimeron reproduce through live birth.

Family structures vary, though long lifespans often create extensive generational lineages.

Sleep Cycle

One of the most unusual Chimeron traits is their sleep pattern.

Typical cycle:

- Awake approximately 9 days
- Sleep approximately 3 days

This pattern is considered completely normal within Chimeron society.

Society

Government

The Chimeron are governed by a council system.

The governing body consists of respected experts from various disciplines.

Members are periodically reevaluated and replaced through established civic processes.

No monarchies currently exist within mainstream Chimeron civilization.

Core Values

The highest values of Chimeron civilization are:

Preservation of Knowledge

Information should never be lost.

Discovery of Knowledge

Understanding should always expand.

Responsible Application

Knowledge must be used responsibly.

Religion & Philosophy

The Chimeron are not a particularly religious species.

Most cultural development is based upon:

- Science
- Evidence
- Observation
- Inquiry

Many individuals hold personal philosophies, but organized religion is uncommon within mainstream Chimeron society.

Education

Education is among the most important institutions on Aurelios.

Learning is viewed as both:

- A privilege
- A responsibility

Most citizens pursue extensive study throughout their lives.

Specialization is common, though interdisciplinary scholarship is highly respected.

Technology

The Chimeron possess advanced technologies including:

- Nanotechnology
- Artificial intelligence
- Neural interfaces
- Adaptive materials

- Orbital infrastructure
- Planetary-scale engineering
- Dyson-scale energy systems
- QFRM-assisted technologies

A dedicated technology reference document details these systems.

QFRM Relationship

The Chimeron understand QFRM scientifically.

They:

- Study it
- Model it
- Utilize it technologically

However, most Chimeron do not experience it intuitively.

This distinction is central to Torrik's story.

His unique relationship with QFRM is unusual even among his own people.

Infrastructure

The Chimeron possess:

- Mature interstellar and intergalactic capability
- Universal transversal travel
- Experimental extraversal or outerversal research
- Dyson-scale energy systems
- Planetary and orbital megastructures
- Extensive scientific infrastructure beyond their home system

Their home system remains important, but it is not the limit of their civilization.

Canon Visual References

Current approved male reference standards:

- Torrik concept reference
- Vertlyx concept reference

Female Chimeron should maintain the same species traits while exhibiting naturally feminine proportions and facial structure.
